

ABSTRACT

In order too simplify the manufacturing process for
a CAD magneto-optical recording medium and reduce the
5 cost therefor, there is provided a magnetically induced
super resolution-type magneto-optical recording medium
which comprises, on a light-transmitting substrate, at
least a recording layer for recording and retaining
information therein, and a read-out layer for copying
10 therein the information retained in the recording layer
during reproduction of the information, wherein the
magneto-optical recording medium has an exchange-coupling
breaking layer between the recording layer and the read-
out layer, wherein the exchange-coupling breaking layer
15 comprises a layer of a nitride of either one of GdFeCo or
TbFeCo.
